

TIPS ON REMOVING RED EYES IN KODAK EASYSHARE

- Open Kodak EasyShare Software, click on one of the photographs in the album with red eyes that you want to remove, in the top row of icons, click on 'Edit'
- A new window with the picture will appear, click on the 'Red Eye' button above the picture
- On the left hand side there is a blue button 'Auto Correct' which will help you to remove red eyes automatically. The software tries to look for red round objects in the picture that look like red eyes, and change these into grey colour. If there are other red round objects in the picture and they are not red eyes, the software may mistaken these and change their colour. If one eye is more red than the other, the software may only change one but not the other
- You can also place the mouse cursor over the red eye. The cursor will turn into a +, put the centre of the + at the centre of the red eye and click the left button of the mouse. Most times the red eye will be corrected right away, but there are exceptions
- If you like the change, click the blue 'Accept' button in the lower left corner, otherwise you can click 'Cancel' to go back to the original picture
- When you are finished, click the blue 'Close' button in the right lower corner, a small window will appear asking you whether you want to save your changes, you can click 'Yes' if you like the changes
